ELSEVIER

JOURNAL OF CRYSTAL GROWTH

Contents

Preface xi

SECTION I. KEYNOTE PAPER

Nucleation and crystallization of globular proteins – what we know and what is missing
F. Rosenberger, P.G. Vekilov, M. Muschol and B.R. Thomas 1

SECTION II. MECHANISMS OF CRYSTAL GROWTH

Protein interactions as seen by solution X-ray scattering prior to crystallogenesis
A. Ducruix, J.P. Guilloteau, M. Riès-Kautt and A. Tardieu 28
Time evolution of refractive index of gelled and gel-free supersaturated lysozyme solutions
O. Vidal, Y. Bernard, M.C. Robert and F. Lefaucheux 40
Kinetic study on the early stage of the crystallization process of two forms of lysozyme crystals by photon correlation spectroscopy
S. Tanaka, M. Yamamoto, K. Kawashima, K. Ito, R. Hayakawa and M. Ataka 44
The crystallization of biological macromolecules from precipitates: evidence for Ostwald ripening
J.D. Ng, B. Lorber, J. Witz, A. Théobald-Dietrich, D. Kern and R. Giegé 50
In situ atomic force microscopy studies of protein and virus crystal growth mechanisms
Yu.G. Kuznetsov, A.J. Malkin, W. Glantz and A. McPherson 63
Incorporation of impurities into macromolecular crystals
A. McPherson, A.J. Malkin, Yu.G. Kuznetsov and S. Koszelak 74
Protein crystal quality studies using rod-shaped crystals
F. Otálora, J.M. García-Ruiz and A. Moreno 93
The heterogeneity in a protein crystal revealed by synchrotron radiation
Y. Higuchi, T. Okamoto and N. Yasuoka 99
X-ray topography of lysozyme crystals
K. Izumi, S. Sawamura and M. Ataka 106
The effects of acetate buffer concentration on lysozyme solubility
E.L. Forsythe and M.L. Pusey 112
Phase diagram of crystallization of *Aspergillus niger* acid proteinase A, a non-pepsin-type acid proteinase
N. Kudo, M. Ataka, H. Sasaki, T. Muramatsu, T. Katsura and M. Tanokura 118
Prenucleation, crystal growth and polymorphism of some proteins
S. Veesler, S. Lafont, S. Marcq, J.P. Astier and R. Boistelle 124
Inter-subunit electrostatic interactions in ferritin molecule: comparison with inter-molecular interactions in crystals
T. Takahashi, M. Hogyoku and K. Nagayama 130
A preliminary study on the interaction of ferritin single crystals with chelating agents
J.M. Dominguez-Vera, D. Rondón, A. Moreno and J.Ma. García-Ruiz 138

SECTION III. METHODS OF PREPARATION, CRYSTALLIZATION AND CRYSTALLOGRAPHY

Rapid purification of the over-expressed membrane 3β-hydroxysteroid dehydrogenase in the presence of detergents
M. Zhou, R. Breton, A. Azzi and S.-X. Lin 142
Protein crystallography with non-detergent sulfobetaines
L. Vuillard, B. Baalbaki, M. Lehmann, S. Nørager, P. Legrand and M. Roth 150
Resolving crystal polymorphisms by finding "stationary points" from quantitative analysis of crystal growth response surfaces
L.F. Kuyper and C.W. Carter Jr. 155
A comparison of microbatch and vapour diffusion for initial screening of crystallization conditions
P. Baldock, V. Mills and P.S. Stewart 170
A novel approach to crystallising proteins under oil
A. D'Arcy, C. Elmore, M. Stihle and J.E. Johnston 175
A microcrystal selection technique in protein crystallization
Q. Han and S.-X. Lin 181

Gel techniques and small angle X-ray scattering to follow protein crystal growth
F. Bonneté, O. Vidal, M.C. Robert and A. Tardieu 185
Cosolute effect on crystallization of two dinucleotide complexes of bovine seminal ribonuclease from concentrated salt solutions
F. Sica, S. Adinolfi, L. Vitagliano, A. Zagari, S. Capasso and L. Mazzarella 192
2D-crystallization of *Rhodococcus* 20S proteasome at the liquid–liquid interface
K. Aoyama 198
Containerless protein crystallization in floating drops: application to crystal growth monitoring under reduced nucleation conditions
B. Lorber and R. Giegé 204
A fiber optic probe for monitoring protein aggregation, nucleation and crystallization
R.R. Ansari, K.I. Suh, A. Arabshahi, W.W. Wilson, T.L. Bray and L.J. DeLucas 216
Crystallization under microgravity of acidic phospholipase A_2 from venom of *Agkistrodon halys* Pallas
J.-S. Pan, X.-T. Niu, L.-L. Gui, Y.-C. Zhou and R.-C. Bi 227
Protein crystal growth in microgravity review of large scale temperature induction method: bovine insulin, human insulin and human alpha interferon
M.M. Long, J.B. Bishop, T.L. Nagabhushan, P. Reichert, G.D. Smith and L.J. DeLucas 233
The effects of cryoprotectant on crystal stability
B. Xiao and S.J. Gamblin 244
The macromolecular crystallography facility at the advanced light source
T. Earnest, H. Padmore, C. Cork, R. Behrsing and S.-H. Kim 248

SECTION IV. CRYSTALLIZATION OF NEW PROTEINS

Crystallization and crystallographic studies on Fab fragments of anti-nitrophenol antibodies from primary and secondary immune responses
R. Mizutani, K. Miura, T. Nakayama, I. Shimada, Y. Arata and Y. Satow 253
Crystallization and preliminary crystallographic data for a ternary complex between tissue factor, factor VIIa and a BPTI-derived inhibitor
E.A. Stura, W. Ruf and I.A. Wilson 260
Crystallization and preliminary X-ray investigation of six new crystal forms of ribonuclease U_2 from *Ustilago sphaerogena*
S. Noguchi, Y. Satow, T. Uchida, C. Sasaki and T. Matsuzaki 270
The crystallogenesis of a human estradiol dehydrogenase–substrate complex
D.-W. Zhu, A. Azzi, P. Rehse and S.-X. Lin 275
Crystallization and preliminary X-ray investigation of a glycoprotein, human renal dipeptidase
Y. Nitanai, Y. Satow, H. Adachi and M. Tsujimoto 280
Crystallization and X-ray diffraction studies of glutathione *S*-transferase from *Escherichia coli*
M. Nishida, S. Harada, Y. Satow, H. Inoue and K. Takahashi 284
Crystallization and preliminary X-ray diffraction studies of θ-toxin (perfringolysin O), a pore-forming cytolysin of *Clostridium perfringens*
M. Sugahara, N. Sekino-Suzuki, Y. Ohno-Iwashita and K. Miki 288
Crystallography of succinimide hen egg-white lysozyme at low temperatures
K. Miyawaki, S. Noguchi, S. Harada and Y. Satow 292
Crystallization and preliminary X-ray characterization of chaperonin-60 from *Paracoccus denitrificans*
T.A. Fukami, Y. Takasuga, M. Sumi, M. Yohda, M. Yoshida and K. Miki 297
Crystallization and structural studies of components of the protein-synthesizing system from *Thermus thermophilus*
M. Garber, N. Davydova, I. Eliseikina, N. Fomenkova, O. Gryaznova, I. Gryshkovskaya, N. Nevskaya, S. Nikonov, A. Rak, S. Sedelnikova, A. Serganov, D. Shcherbakov, S. Tishchenko, V. Vysotskaya, J. Zheltonosova, A. Liljas, A. Aevarsson and S. Al-Karadaghi 301
Ribosomal crystallography: from crystal growth to initial phasing
J. Thygesen, S. Krumbholz, I. Levin, A. Zaytzev-Bashan, J. Harms, H. Bartels, F. Schlünzen, H.A.S. Hansen, W.S. Bennett, N. Volkmann, I. Agmon, M. Eisenstein, A. Dribin, E. Maltz, I. Sagi, S. Morlang, M. Fua, F. Franceschi, S. Weinstein, N. Böddeker, R. Sharon, K. Anagnostopoulos, M. Peretz, M. Geva, Z. Berkovitch-Yellin and A. Yonath 308
